Skytap Virtual IT Labs Case Study:

BeyondTrust saves time with automated virtual lab provisioning and a strong LMS integration

Background

Using a home-grown interface to support lab provisioning was difficult to maintain and very confusing for learners, including customers and external partners. Facing strong organic growth and rising demand for courses, BeyondTrust knew they needed a more powerful, efficient, and easy-to-use virtual labs solution.

Challenge

BeyondTrust University offers a variety of training courses in numerous formats including virtual, onsite, live, and on-demand to help customers understand BeyondTrust products and principles related to privileged remote access. Prior to Skytap, BeyondTrust was using a home-grown interface to support learners. However, the system was difficult to maintain and update, and was confusing for learners to use for both internal and external labs. Facing strong organic growth, mergers and acquisitions, and global expansion, BeyondTrust needed a virtual labs solution that could keep pace with its growth, better support its learners, integrate with a learning management system (LMS) and make it easy for the internal team to support. In addition to the growing number of labs, BeyondTrust also had the need for strong performance since latency was an issue with delivering labs to learners across the globe.

Overview

INDUSTRY:
Cybersecurity

OBJECTIVE:
Support high-quality, scalable training

USE CASE:
Virtual Training

About the Company

BeyondTrust is a worldwide leader in Privileged Access Management, providing the most seamless approach to preventing data breaches related to stolen credentials, misused privileges, and compromised remote access. BeyondTrust offers privileged password management, secure remote access, endpoint privilege management, cloud security management, and more. BeyondTrust University helps customers and partners to rapidly learn about BeyondTrust products and to experience a live automation environment.

Solution

BeyondTrust selected Skytap Virtual IT Labs due to the following product features and capabilities:

- Scalability and usability
- On-demand delivery and latency
- Easy instructor access and controls

- Global availability and geographical locations of datacenters
- Ability to quickly provision environments
- Ability to use the API to automate provisioning
- Ability to integrate with its LMS

Skytap's Course Manager solution, an add-on of the Skytap Virtual IT Labs offering, was appealing because it supports different class types, rather than a demonstration environment for a single client. Additionally, BeyondTrust wanted the ability to re-use templates for classes rather than setting up the environment each time.

With Skytap, BeyondTrust utilized the Course Manager API to automate the provisioning of labs for each learner, which saves the team invaluable time as they were previously manually provisioning each course. BeyondTrust has also integrated Skytap with its LMS, Intellum, to deliver a seamless learning experience. Learners log into Intellum and there is a custom Skytap link for each course embedded in the interface. Each lab is configured to automatically provision a few minutes before the start time of the course or each time a learner selects an on-demand class.

2,000 Minutes saved per month

Before the automation, it took BeyondTrust around 10 minutes to provision each lab, and with at least 200 labs per month, the team saves 2,000 minutes per month through automated provisioning with the API.

Outcomes

BeyondTrust University utilizes Skytap Virtual IT Labs to support 200 to 300 labs per month. In the last two years, BeyondTrust has seen a 40% increase in labs for customer training and a 30% increase in labs for partners. With this increase in growth, BeyondTrust saves time by automating the provisioning of labs.

"The time saved with the automation is astronomical and it minimizes errors at the same time," notes Sandra Hanna, Senior Vice President, Education and Enablement at BeyondTrust.

By using Skytap, BeyondTrust is able to:

- Save 2,000 minutes per month through automated provisioning
- Eliminate human error in provisioning through automation
- Integrate the Intellum LMS API with Skytap to improve the user experience
- Include Skytap lab monitoring results in its Education Services Dashboard for strong reporting
- Support hundreds of virtual labs per month
- Support learners across the globe with high speed of delivery and no latency issues

Since starting with Skytap, the company has expanded its use case to external partners -value added resellers and delivery partners -that it is doing technical enablement for. BeyondTrust also envisions that its sales enablement team will begin to use Skytap more as it expands its customer base.

Skytap®
A Kyndryl Company

Learn more about how Skytap can help your organization provide virtual IT labs to support virtual training, demos and POCs

Skytap is a cloud service purpose-built to run specialized workloads in Microsoft Azure and IBM Cloud. As the best cloud service to support AIX, IBM i, and Linux on IBM Power together with x86, Skytap makes it easy to evolve traditional workloads by rapidly migrating them to the cloud. Enterprises around the world use Skytap for production workloads, disaster recovery, virtual training labs, and application development. Skytap's cloud environment simplifies management, reduces IT costs, speeds up application development, and allows organizations of all sizes to modernize at the pace of their business. Skytap is a Kyndryl company. To learn more or schedule a demo, visit www.skytap.com.
